RFP #12-055

1.0 Introduction

El Paso County is the westernmost county of Texas. Bounded on the southwest by the Rio Grande and Mexico, on the north and west by the state of New Mexico, and on the east by Hudspeth County, Texas. El Paso County is approximately 650 miles west of Dallas and 575 miles northwest of San Antonio. El Paso County and neighboring Hudspeth County are the only Texas counties on Mountain Time. The county comprises of 1,057 square miles of desert and irrigated land that rises from an elevation of 3,500 feet and the Rio Grande to 7,000 feet at the summits of the Franklin Mountains. County population is 800,647 (2010 estimate). Some 240 square miles of the county is occupied by the city of El Paso, the largest United States City on the Mexican border.

El Paso County leadership is aware that their core administrative systems are aging and will no longer be supported in the near future. As a means of performing due diligence efforts in assessing the County's options, the County is considering the implementation of a new enterprise resource planning (ERP) system in order to ensure effective and efficient operation of county government in meeting its needs and to enable adequate planning and budgeting of future costs. Major drivers that support the implementation of a new ERP system include:

- Migration from mainframe architecture to the latest network technology.
- Complete seamless software and systems integration and one-time entry solutions to include Payroll and Human Resources, Accounting (GL, AR, AP, etc.) Fixed Assets, Budget and Forecasting, Cashiering and Cash Management, Grant Management, Requisition, and Purchasing Management Software while maintaining and enhancing technical, functional, and procedural innovations that may be available.
- Uniformity with uniform chart of accounts and financial reporting.

The county currently runs the following modules:

Module	Release/Vendor
Financial Accounting Management Information System (FAMIS)	Release 4.2/Cogsdale
Budgeting Software (BPREP)	Release 4.5/Cogsdale
Fixed Asset Software (FAACS)	Release 4.2/Cogsdale
Integral (Payroll/Human Resources)	Release 9.55/Integral
Time and Attendance	Release 6.0/Kronos

The County of El Paso is looking for an enterprise resource planning (ERP) system. The ERP applications will provide visibility into the county's finances through automation and process support for any activity that has a financial impact and provide financial reporting data. The core financial management applications consist of the following modules:

- General Ledger (GL) — The GL records and aggregates the financial impact of transactions in accordance with user-defined classifications. It produces financial accounting reports in accordance with generally accepted accounting principles (GAAP).
- Accounts Payable (AP) — Records and tracks invoices or payments due to suppliers, contractors, etc., and manages the payment of these items.
- Inventory/Asset Management — Tracks the financial value of fixed assets, enabling an auditable "asset register" to be produced. Maintains a history of accounting events that occur during the life of an asset (such as depreciation and revaluation) in accordance with GAAP. It also maintains a physical location of the asset for audit purposes.

In addition to the core financial applications, the following modules are an extension to ensure financial functionality:

- Projects and Grants — The ability to monitor expenditure against projects and grants using expenditure classifications and time periods that differ from those used in the GL but that are immediately reconciled with them. Project and grant systems support project managers (for example, expenditures analyzed by work breakdown structure and life-to-date) while posting financial information from the same transaction to the appropriate GL period and cost codes.
- Treasury and Cash Management (Accounts Receivable) — Functionality to manage currency exposure, hedging and increasingly in-house banking and cash pooling. This functionality provides the cash management capabilities.
- Reporting and analysis capabilities — In addition to the reporting capabilities provided with the modules, users of financial applications expect advanced reporting and analysis capabilities. These include integration with Excel and other desktop reporting capabilities, the ability to perform multidimensional analysis from many perspectives on financial data, and capabilities to create data warehouses based on the financial data model that enable financial data to be analyzed with budget and forecast data.
- Budgeting, payroll, and human resources — A budgeting, payroll, and human resources system that is part of the ERP management suite. This should support common metadata; therefore, allowing data to be imported and exported to other ERP modules.
