**Paving and Overlay Services for
2016 Overlay Paving Project for the
County of El Paso**

Bid # 16-053

**Opening Date
Wednesday, August 31, 2016**

SCOPE OF WORK:

The County of El Paso ("County") is seeking a qualified paving company to provide labor and equipment for the County's 2016 Road and Bridge Overlay Program.

This project consists of overlaying the listed roads with 2", Grade "C" H.M.A.C. that will be provided by El Paso County's supplier.

The County estimates 23,250 tons of HMAAC will be needed to overlay designated roads in the communities of Canutillo, East Montana, and Fabens in El Paso County. The 2016 overlay project will take approximately 2-3 weeks to complete. (Weather Permitting)

The bid price will be per ton and should include 0.25 gal/sy tack coat along with all equipment, labor, tools and incidentals to complete this project. Work will be paid by the ton of material laid down. The mileages are for showing road length only. Roadway widths will vary from 18 feet to 36 feet. The estimated amount of tonnage is 22,900 tons for the entire project. Several roads intersect TxDOT ROW; therefore, it will be necessary to have Traffic Control measures at these intersections and throughout the project.

CONSTRUCTION METHODS

Weather Limitations: The H.M.A.C. mixture shall not be placed upon a wet surface or when the surface temperature of the underlying course is less than 45° degree F.

Bituminous Pavers: Bituminous pavers shall be self contained, power propelled units with an activated screed or strike off assembly, heated if necessary, and shall be capable of spreading and finishing courses of bituminous plant mix material which will meet the specified thickness, smoothness, and grade. Pavers used for shoulders and similar construction shall be capable of spreading and finishing courses of bituminous plant mix material in widths shown on the plans, if available and shall be capable of operating at forward speeds consistent with satisfactory laying of the mixture.

The paver shall have a receiving hopper of sufficient capacity to permit a uniform spreading operation. The hopper shall be equipped with a proportional feed control system to place the mixture uniformly in front of the screed. The screed or strike off assembly shall effectively produce a finished surface of the required evenness and texture without rearing, shoving, or gouging the mixture.

If an automatic grade control device is used, the paver shall be equipped with a control system capable of automatically maintaining the specified screed elevation. The control system shall be automatically actuated from either a reference line or surface through a system of mechanical sensors or sensor directed mechanisms or devices, which will maintain the paver screed at a predetermined transverse slope and at the proper elevation to obtain the required surface. The transverse slope controller shall be capable of maintaining the screed at the desired slope within plus or minus 0.1 percent. The controls shall be capable of working in conjunction with any of the following attachments:

- a). Ski type device of not less than 30 feet (9.14 m) in length or as directed by the County representative.
- b). Taut string line (wire) set to grade.
- c). Short ski or shoe.

Rollers: One 10 ton minimum three wheel steel static roller or one 16 ton minimum tandem steel drum static roller equipped with an electric water pump, spray bar, hand serviceable nozzles, electronic water flow control, double blade scrapers and a single full width cocoa mat on each wheel, a wheel spray back-up system complete with its own water pump, filter and spray bar are required. Additionally, adequate safety equipment to include working lights with turn signals and four-way flashers, stop lights, back-up alarm, horn, and a yellow rotating beacon visible to on-coming traffic is required for these rollers and must be in use at all times during paving.

One 10-ton minimum tandem steel drum static roller equipped with an electric water pump, spray bar, hand serviceable nozzles, electronic water flow control, double blade scrapers and a single full-width cocoa mat on each drum, a drum spray back-up system complete with its own water pump, filter and spray bars are required. Additionally, adequate safety equipment to include working lights with turn signals and four-way flashers, stop lights, back-up alarm, horn, and a yellow rotating beacon visible to on-coming traffic is required for this roller and must be in use at all times during operation.

One 25-ton minimum pneumatic roller equipped with an electric water pump, spray bar and cocoa mat for each tire, hand serviceable nozzles, electronic water flow control system, a tire spray back-up system complete with its own water pump, filter and spray bars are required. Additionally, adequate safety equipment to include working lights with turn signals and four-way flashers, stop lights, back-up alarm, horn and a yellow rotating beacon visible to on-coming traffic is required for this roller and must be in use at all times during operation.

Initial break down rolling will be done with the three (3) wheel steel static roller or the 16 ton tandem steel drum static roller and the finish rolling will be done with the 10 ton tandem steel static drum roller.

Rolling shall continue until no further compression can be obtained and all roller marks are eliminated. The motion of the roller shall be slow enough at all times to avoid displacement of the mixture. If any displacement occurs it shall be corrected at once.

The roller shall not be allowed to stand on a surface, which has not been fully compacted. All wheels are to be kept thoroughly moistened with no excess permitted. In lieu of the rollers specified, the contractor may upon prior written permission of the County representative, operate other compacting equipment that will produce the same compaction as the specified equipment.

The cost of rolling shall be included in the cost of H.M.A.C. overlay.

Spreading and Finishing: Deliveries shall be scheduled with the County's supplier so that spreading and rolling of all mixture prepared for one day's run can be completed during daylight, unless adequate artificial lighting is provided. Hauling over freshly placed material shall not be permitted until the material has been compacted, as specified and allowed to cool to atmospheric temperature.

Prior to placing the bituminous mixture, the existing surface shall be cleared of all grass, dirt, loose/compacted milling materials, and wedges.

This work shall be completed with mechanical street sweepers, power blowers, power brooms, picks and/or hand brooms as part of the H.M.A.C. overlay process, and shall be completed to the satisfaction of the County representative prior to commencement of laying the asphalt at no additional cost to the County.

The mix shall be placed at a temperature of not less than 250 degrees F (107 degrees C) when asphalt cement is used and not less than 150 degrees F (65 degrees C) when tar is used.

Upon arrival, the mixture shall be spread to the full width by an approved bituminous paver. It shall be struck off in a uniform layer of such depth that, when the work is completed, it shall have the required thickness and conform to the grade and contour indicated. The speed of the paver shall be regulated to eliminate pulling and tearing of the bituminous mat, keep the stopping of the paver to a minimum and to a speed which will permit rollers to stay within 150' behind the paver at all times.

The receiving hoppers on the paver should at no point in time be raised to deposit H.M.A.C. existing on the wings into the screed, and at no time will the hoppers or conveyor belts be sprayed or contaminated with kerosene or diesel fuels prior to or during the paving operations.

Unless otherwise directed, placement of the mixture shall begin along the centerline of a crowned section or on the high side of areas with a one way slope. On streets with inverted crown, no joint will be placed at the invert of the street. The mixture shall be placed in consecutive adjacent strips having a minimum width of [12'] except where edge lanes require less width to complete the area.

On areas where irregularities or unavoidable obstacles make the use of mechanical spreading and finishing equipment impractical, upon prior written permission by the County representative, the mixture may be spread, raked, and lute by hand tools.

Compaction of Mixture: After spreading, the mixture shall be thoroughly and uniformly compacted by rolling. The surface shall be rolled when the mixture has attained sufficient stability so that the rolling does not cause undue displacement, cracking or shoving. The sequence of rolling operations and the type of rollers used shall be at the discretion of the County representative during the rolling process.

The speed of the roller shall, at all times, be sufficiently slow to avoid displacement of the hot mixture. Any displacement occurring as a result of reversing the direction of the roller or from any other cause shall be corrected at once.

Sufficient rollers shall be furnished to handle the output of the plant. Rolling shall continue until all roller marks are eliminated, the surface is of uniform texture and true to grade and cross section, and the required field density is obtained.

To prevent adhesion of the mixture to the roller, the wheels shall be kept properly moistened, but excessive water will not be permitted.

In areas not accessible to the roller, and upon prior written consent from the County representative the mixture shall be thoroughly compacted with hot hand tampers during the rolling process.

Any mixture that becomes loose and broken mixed with dirt, or in any way defective shall be removed and replaced with fresh hot mixture and immediately compacted to conform to the surrounding area. This work shall be done at the Contractor's expense. Skin patching shall not be allowed.

A minimum prime coat coverage of 0.25 gallons per square yard shall be placed on all exposed base to the satisfaction of the County representative throughout the asphalt laying process and at no additional cost to the County.

Joints: The formation of all joints shall be made in such a manner as to ensure a continuous bond between old and new sections of the course. All joints shall have the same texture, density, and smoothness as other sections of the course.

The roller shall not pass over the end of the freshly laid mixture except when necessary to form a transverse joint.

When necessary to form a transverse joint, it shall be made by means of placing a bulkhead or by tapering the course, in which case the edge shall be cut back to its full depth and width on a straight line to expose a vertical face. In both methods all contact surfaces shall be given a tack coat of bituminous material before placing any fresh mixture against the joint.

Longitudinal joints which are irregular, damaged, or otherwise defective shall be cut back to expose a clean sound surface for the full depth of the course. All contact surfaces shall be given a tack coat of bituminous material prior to placing any fresh mixture against the joint.

Surface Tests: The Contractor shall make tests for conformity with the specified crown and grade immediately after initial compaction. Any variation shall be corrected by the removal or addition of materials and by continuous rolling.

The finished surface shall not vary more than [1/4"] for the surface course when tested with a 16.0 foot (4.8 m) straight edge applied parallel with, or at right angles to the center line.

After the completion of final rolling, the smoothness of the course shall be tested by the County representative throughout the duration of the project; humps or depressions exceeding the specified tolerances shall be immediately corrected by removing the defective work to full depth and width and replacing with new material, as directed by the County representative. This shall be done at the Contractor's expense.

The finished surfaces of bituminous courses shall not vary from the grade line, elevations; and cross sections shown (if available) on the contract drawings by more than [1/2] inch (12.70 mm). The Contractor shall correct pavement areas varying in excess of this amount by paving and replacing to full depth and width the defective work. Skin patching will not be permitted.

Sample Pavement: Core samples as obtained by the County's geotechnical testing laboratory shall obtain determination of the density of completed pavements. The size, number, and locations of the samples will be as directed by the County representative. Samples shall be neatly cut neatly with a core drill, saw or other approved equipment.

Thickness: The thickness of the pavement course shall be determined by cores taken at every 500 square yards or at every 125 lin. ft. of street with a minimum of two (2) tests taken for each street when deemed necessary by the County representative.

BIDDER QUALIFICATIONS AND MISCELLANEOUS SERVICES

The successful bidder must have been in the business of commercial HMAC paving for the period of two (2) years. The successful bidder must be licensed to do business in Texas.

The successful bidder will work with the County's HMAC supplier in placing orders for HMAC. The contractor will call the HMAC supplier and place orders for a designated amount of tons of HMAC to be delivered to the project site. Depending on the speed in which the roads are laid, the contractor may request multiple orders of HMAC in a day. All HMAC ordered must be laid down on the day of delivery.

The County will have a representative on site collecting the bills of lading from the HMAC supplier and verifying the amount of tons laid down for billing purposes. Only tons that have been laid down will be paid.

The bidder shall provide three (3) references of other government agencies in which they have provided overlay paving services in the past 3 years. Use the "References" Form included with this bid.

If the contractor receives an award as a result of its bid/proposal submission, failure to have made such investigations and examinations will in no way relieve the contractor from its obligation to comply in every detail with all provisions and requirements of the contract, nor will a plea of ignorance of such conditions and requirements be accepted as a basis for any claim whatsoever by the contractor for additional compensation.
